

WAB
MANAGED SERVICES

WAB Managed Services (WMS)
You don't need to invest more in IT resources
for the very best in **privileged user management**

WALLIX
TRACE, AUDIT & TRUST

Wallix AdminBastion Managed Services is a fully featured, flexible and scalable solution for controlling, managing and securing privileged user access.

WAB Managed Services

You want to make sure you can manage privileged users and third-party providers as they increase the risks surrounding your sensitive and confidential information. And continuous compliance with the increasing number of regulatory standards, such as Basel, SOX, PCI DSS and laws governing the control of electronic medical records are becoming critical to your business.

Wallix AdminBastion

Wallix AdminBastion (WAB) is a privileged user access control and traceability solution designed for simple integration into information systems. In a matter of hours, WAB will give you information on “who, what, when, where, and how”, in real time or logs, on your privileged users. WAB controls all access to privileged accounts by internal and external IT service providers and high-risk users. You can also record their work sessions and review them as and when needed (audit, incident, forensics, etc.).

With WAB, you can easily manage IT team turnover and ensure that critical servers cannot be accessed by individuals no longer authorised to do so. In addition, WAB can link any connection to an anonymous account with a named user - thereby guaranteeing accountability both of connections and of actions. Responsibility is traced more rapidly in the event of an incident, enabling you to respond equally rapidly as a result.

You can find out more about [Wallix AdminBastion](http://www.wallix.com) at www.wallix.com

Managed Services

Whether you're challenged with meeting IT budget demands, have a strategy to outsource IT operations or are just looking for more efficiency around your compliance and security initiatives, we understand that all businesses are different, our managed services are designed to give you complete flexibility to help you meet your objectives.

Wallix AdminBastion Managed Services will provide you with solution sized and located for your business needs and managed by WALLIX or your trusted third party provider.

We'll take responsibility for:

- **Installation of the solution**

We'll set up your Wallix AdminBastion wherever you want it and configure it to operate inside your existing infrastructure.

- **Everyday administration and operation**

We'll ensure that the Wallix AdminBastion is effectively acting as a gateway for privileged users who need access to resources on your network.

- **Adding new users and devices**

We can help to add any new user accounts to the Wallix AdminBastion as well as incorporating new servers, applications or other devices that you want to control access to.

- **Remote monitoring**

We'll continually monitor your Wallix AdminBastion making sure that it's up and running. And you'll be backed up by our team dedicated product experts in Wallix Support Services <http://www.wallix.com/en/services/support>.

- **Comprehensive reporting**

Each month you'll receive a complete report of all the activity on your Wallix AdminBastion, including session details, approval workflows and user activities.

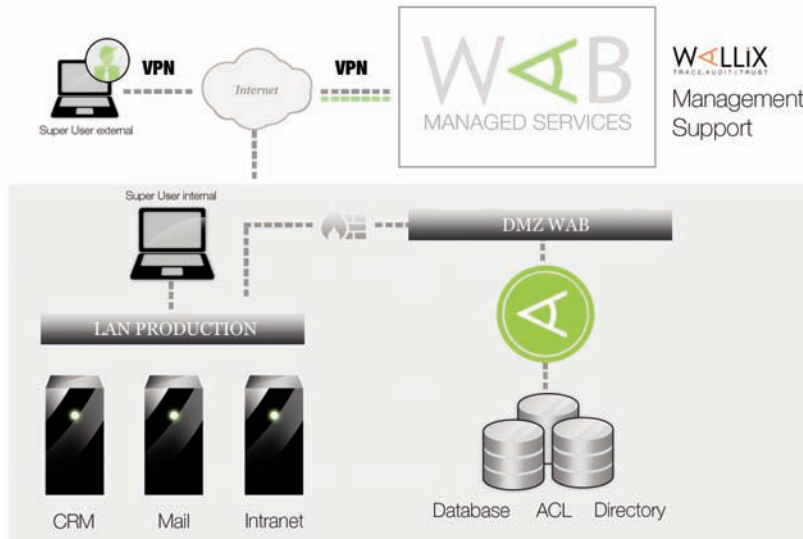

- **Full delegation of your project to a trusted third party**

From installation to daily operations, privileged user management becomes a solution that helps meet the compliance and security requirements of your business. And you no longer need to make valuable resources available to manage the product.

- **Financial flexibility**

You aren't making a long term investment in terms of licensing or maintenance, so you know that the total cost will include not only a product but a complete solution including the personnel to manage it.

About Wallix

At WALLIX our mission is empowering your organisation to confidently give the right people access to the right IT systems. Our approach to security isn't just blocking access but giving you the freedom and visibility to keep your staff, service providers and contractors working securely and effectively.

WALLIX engineers software solutions that give our customers all over the world a better way to manage and secure access to IT infrastructure for privileged users. Creating a single gateway with single sign-on for access by members of internal IT teams or third party service providers. Access rights and passwords to servers, appliances and other devices can all be handled in a single console, helping to manage IT team turnover and ensure that critical servers are only accessed by the people you've approved. And we take you beyond event logging by letting you monitor and capture session activity in real-time.

WALLIX AdminBastion (WAB) is developed and maintained by our experienced in-house team. And we keep usability at the heart of our philosophy. The WAB is engineered as a non-intrusive and agentless technology making it simple for you to configure, operate and administer day to day. No software is required on either the client or target devices.

We're growing fast, supported by a global network of certified partners and value-added resellers across EMEA, CIS, APAC and North America. Our honesty and commitment to supporting our customers is why more than 200 organisations worldwide choose WALLIX. We offer the best solution and value from a company that's easy to work with.
